

SOT Temperature Sensors with Period/Frequency Output

MAX6576/MAX6577

General Description

The MAX6576/MAX6577 are low-cost, low-current temperature sensors with a single-wire output. The MAX6576 converts the ambient temperature into a square wave with a period proportional to absolute temperature ($^{\circ}\text{K}$). The MAX6577 converts the ambient temperature into a square wave with a frequency proportional to absolute temperature. The MAX6576 offers accuracy of $\pm 3^{\circ}\text{C}$ at $+25^{\circ}\text{C}$, $\pm 4.5^{\circ}\text{C}$ at $+85^{\circ}\text{C}$, and $\pm 5^{\circ}\text{C}$ at $+125^{\circ}\text{C}$. The MAX6577 offers accuracy of $\pm 3^{\circ}\text{C}$ at $+25^{\circ}\text{C}$, $\pm 3.5^{\circ}\text{C}$ at $+85^{\circ}\text{C}$, and $\pm 4.5^{\circ}\text{C}$ at $+125^{\circ}\text{C}$.

Both devices feature a single-wire output that minimizes the number of pins necessary to interface with a micro-processor. The period/frequency range of the output square wave can be selected by hard-wiring the two time-select pins (TS0, TS1) to either V_{DD} or GND. The MAX6576/MAX6577 are available in space-saving 6-pin SOT23 packages.

Features

- ◆ Simple Single-Wire Output
- ◆ Two Output Types Available
 - Temperature to Period (μs) (MAX6576)
 - Temperature to Frequency (Hz) (MAX6577)
- ◆ $\pm 0.8^{\circ}\text{C}$ Accuracy at $+25^{\circ}\text{C}$ ($\pm 3^{\circ}\text{C}$ max)
- ◆ No External Components
- ◆ Operates from $+2.7\text{V}$ to $+5.5\text{V}$ Supply Voltage
- ◆ Low $140\mu\text{A}$ Typical Supply Current
- ◆ Standard Operating Temperature Range: -40°C to $+125^{\circ}\text{C}$
- ◆ Small 6-Pin SOT23 Package

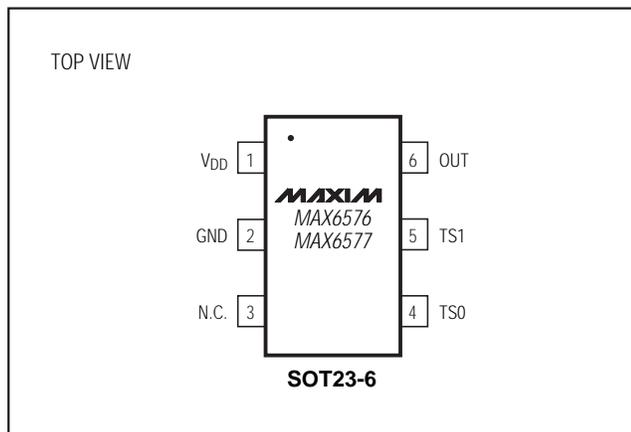

Applications

- Critical μP and μC Temperature Monitoring
- Portable Battery-Powered Equipment
- Cell Phones
- Battery Packs
- Hard Drives/Tape Drives
- Networking and Telecom Equipment
- Medical Equipment
- Automotive

SOT Temperature Sensors with Period/Frequency Output

Pin Description

PIN	NAME	FUNCTION
1	V _{DD}	Positive Supply Voltage
2	GND	Ground
3	N.C.	No Connection. Connect pin to GND or leave open.
4, 5	TS1, TS0	Time-Select Pins. TS1 and TS0 set the temperature scale factor by connecting TS1 and TS0 to either V _{DD} or GND. See Tables 1 and 2.
6	OUT	Square-Wave Output with a Clock Period Proportional to Absolute Temperature (°K) (MAX6576)
		Square-Wave Output with a Clock Frequency Proportional to Absolute Temperature (°K) (MAX6577)

Table 1. MAX6576 Time-Select Pin Configuration

TS1	TS0	SCALAR MULTIPLIER (μs/°K)
GND	GND	10
GND	V _{DD}	40
V _{DD}	GND	160
V _{DD}	V _{DD}	640

Note: The temperature, in °C, may be calculated as follows:

$$T(^{\circ}\text{C}) = \frac{\text{period}(\mu\text{s})}{\text{scalar multiplier}(\mu\text{s}/^{\circ}\text{K})} - 273.15^{\circ}\text{K}$$

Table 2. MAX6577 Time-Select Pin Configuration

TS1	TS0	SCALAR MULTIPLIER (Hz/°K)
GND	GND	4
GND	V _{DD}	1
V _{DD}	GND	1/4
V _{DD}	V _{DD}	1/16

Note: The temperature, in °C, may be calculated as follows:

$$T(^{\circ}\text{C}) = \frac{\text{frequency}(\text{Hz})}{\text{scalar multiplier}(\text{Hz}/^{\circ}\text{K})} - 273.15^{\circ}\text{K}$$

Detailed Description

The MAX6576/MAX6577 low-cost, low-current (140μA typ) temperature sensors are ideal for interfacing with microcontrollers (μCs) or microprocessors (μPs). The MAX6576 converts ambient temperature into a 50% duty-cycle square wave with a period proportional to absolute temperature. The MAX6577 converts ambient temperature into a 50% duty-cycle square wave with a frequency proportional to absolute temperature. Time-select pins (TS1, TS0) permit the internal temperature-controlled oscillator (TCO) to be scaled by four preset multipliers. The MAX6576/MAX6577 feature a single-wire interface to minimize the number of port pins necessary for interfacing with a μP.

MAX6576 Characteristics

The MAX6576 temperature sensor converts temperature to period. The output of the device is a free-running, 50% duty-cycle square wave with a period that

is proportional to the absolute temperature (°K) of the device (Figure 1). The MAX6576 has a push/pull CMOS output with sharp edges. The speed of the output square wave can be selected by hard-wiring TS1 and TS0 as shown in Table 1. One of four scaled output periods can be selected using TS1 and TS0.

MAX6577 Characteristics

The MAX6577 temperature sensor converts temperature to frequency. The output of the device is a free-running, 50% duty-cycle square wave with a frequency that is proportional to the absolute temperature (°K) of the device (Figure 2). The MAX6577 has a push/pull CMOS output with sharp edges. The speed of the output square wave can be selected by hard-wiring TS1 and TS0 as shown in Table 2. One of four scaled output frequencies can be selected using TS1 and TS0.

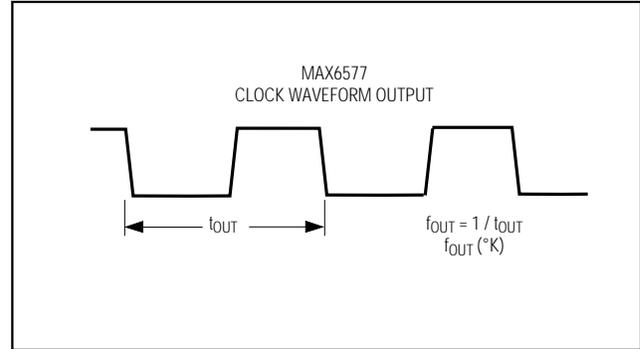

Figure 2. MAX6577 Timing Diagram

Applications Information

Quick-Look Circuits

Figure 3 shows a quick-look application circuit for the MAX6576 using a universal counter measuring period. TS1 and TS0 are both tied to ground to select a scalar multiplier of $10\mu s/^{\circ}K$. The MAX6576 converts the ambient temperature into a square wave with a period that is 10 times the absolute temperature of the device in μs . At room temperature, the universal counter will display approximately $2980\mu s$.

Figure 4 shows a quick-look application circuit for the MAX6577 using a universal counter measuring frequency. TS1 is tied to ground and TS0 is tied to V_{DD} to select a scalar multiplier of $1Hz/^{\circ}K$. The MAX6577 converts the ambient temperature into a square wave with a frequency that is equal to the absolute temperature of the device in Hertz. At room temperature, the universal counter will display approximately 298Hz.

Interfacing with a Microcontroller

Figure 5 shows the MAX6577 interfaced with an 8051 μC . In this example, TS1 is tied to ground and TS0 is

tied to V_{DD} to select a scalar multiplier of $1Hz/^{\circ}K$. The MAX6577 converts the ambient temperature into a square wave with a frequency that is equal to the absolute temperature of the device in Hertz. The 8051 μC reads the frequency of the square-wave output of the MAX6577 into Timer 0 and displays the temperature as degrees Celsius in binary on Port 1. Listing 1 provides the code for this application. The interface is similar for the MAX6576, except the μC will perform a period measurement.

Noise Considerations

The accuracy of the MAX6576/MAX6577 is susceptible to noise generated both internally and externally. The effects of external noise can be minimized by placing a $0.1\mu F$ ceramic bypass capacitor close to the supply pin of the devices. Internal noise is inherent in the operation of the devices and is detailed in Table 3. Internal averaging minimizes the effect of this noise when using longer scalar timeout multipliers. The effects of this noise are included in the overall accuracy of the devices as specified in the *Electrical Characteristics*.
