

Digital Output Type 3-axis Acceleration Sensor

HAAM-375

Functional interrupt output function reduces your burden of developing application software !!

■ Features

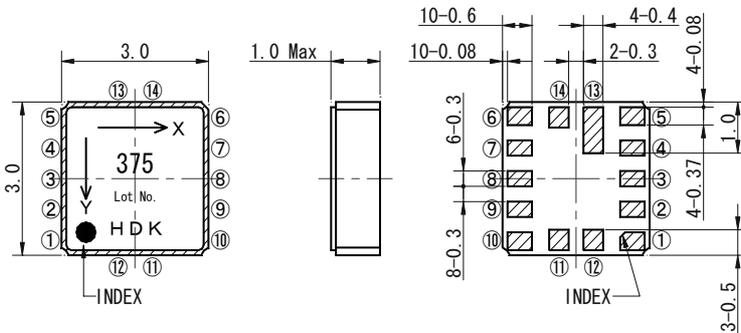

- Output various interrupt signals by preset threshold (Screen info, Wakeup, Drop detection)
- 8-bit digital acceleration signal output
- Serial Interface available (I2C)
- Low Voltage Drive (2.4V~), Interface block can be driven by as low as 1.7V
- Low Power Consumption Standby mode: (3μ A Max.)
Normal mode:100μ A Max. (when DR=10ms selected)
- Various calibrations are done by built-in EEPROM

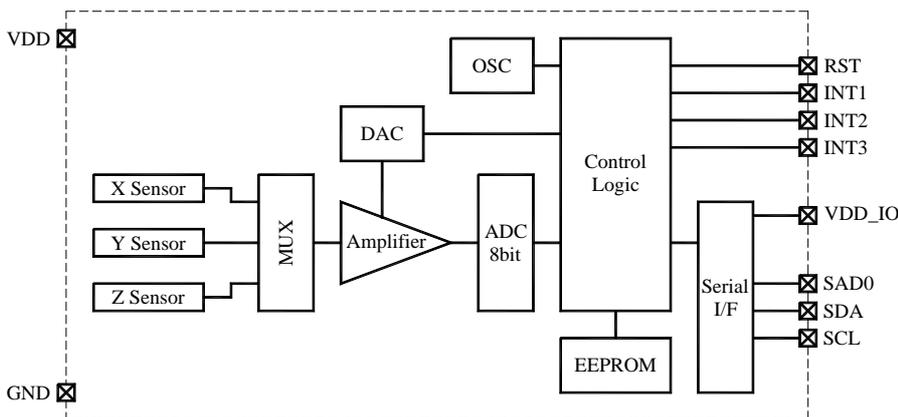

■ Additional function

| Item | Function |
|---------------------------------|---|
| Data rate change function | This function is to change data rate(DR) by register setting Settable data rate: 10,80,160,320mS |
| Moving average measure function | This function is to output result which averaged measure value by designated number of times. (4, 8, 16 times) When moving average is selected, internal sampling cycle becomes 5mS and data rate will be determined by 5mSxaverage number of times. |

Digital Output Type 3-axis Acceleration Sensor

HAAM-375

Terminal Assignment & Functions

| No | Terminal | Function |
|----|----------|---|
| 1 | RST | Reset signal input (Lo: Reset / Hi: Normal operation) |
| 2 | GND | Power ground |
| 3 | | |
| 4 | | |
| 5 | | |
| 6 | INT1 | Interrupt 1 signal output |
| 7 | INT2 | Interrupt 2 signal output |
| 8 | INT3 | Interrupt 3 signal output |
| 9 | SCL | I2C Serial data clock input |
| 10 | SDA | I2C Serial data input/output |
| 11 | Reserved | Please connect to GND. |
| 12 | SAD0 | I2C Slave address LSB setting This terminal has pull-up resistor (300k Ω Typ.) against VDD_IO built in. When Open processed, slave address LSB becomes Hi. |
| 13 | VDD | Power supply input to drive sensor |
| 14 | VDD_IO | Power supply input to drive serial interface. If its voltage differs from sensor drive power supply, please connect interface power supply to this terminal. If the drive power supply is same, please short-circuit to VDD terminal. |

Standard Specification

Ta=25°C, Vcc=2.5V

| Item | Rating | | | Unit | Remark | | |
|--------------------------------|-----------------------------|------------------------|---------|------|--|------------------------------------|---|
| | Min. | Typ. | Max. | | | | |
| Operating Condition | | | | | | | |
| Temperature Range | Storage Temperature Range | -40 | | 85 | °C | | |
| | Operating Temperature Range | -25 | | 75 | °C | | |
| Power Supply | Operating Voltage Range | 2.4 | 2.5 | 3.6 | V | VDD | |
| | Interface Voltage Range | 1.7 | | VDD | V | | |
| | Current Consumption | DR=10ms | | 50 | 100 | μ A | When normal mode selected Able to change by register setting |
| | | DR=80ms | | 10 | 20 | μ A | |
| | | DR=160ms | | 8 | 15 | μ A | |
| | | DR=320ms | | 6.5 | 10 | μ A | |
| | Standby Current | | 1 | 3 | μ A | When standby mode selected | |
| Turn On Time | | | 1 | ms | Transition time from Standby to Normal mode (When NO moving average selected) | | |
| Shock Durability | | 5000 | | | G | | |
| Electrical Characteristics | | | | | | | |
| Rated Acceleration | | | \pm 2 | | G | | |
| Output Resolution | \pm 2G | | 15.6 | | mg/LSB | 8bit output | |
| | | 58 | 64 | 70 | LSB/G | When normal mode selected | |
| Sampling Frequency | | 100, 12.5, 6.25, 3.125 | | | Hz | Able to change by register setting | |
| Serial Interface Specification | | | | | | | |
| I2C Interface Speed | | | 400 | | kHz | | |
